

Main root

<html> ... </html>

The HTML <html> element represents the root (top-level element) of an HTML document, so it is also referred to as the root element. All other elements must be descendants of this element.

Example:

```
<!DOCTYPE html>
<html lang="en">
  <head>...</head>
  <body>...</body>
</html>
```

Document metadata

<head> ... </head>

The HTML <head> element contains machine-readable information (metadata) about the document, like its title, scripts, and style sheets.

<link>

The HTML External Resource Link element (<link>) specifies relationships between the current document and an external resource. This element is most commonly used to link to stylesheets, but is also used to establish site icons (both "favicon" style icons and icons for the home screen and apps on mobile devices) among other things.

<meta>

The HTML <meta> element represents metadata that cannot be represented by other HTML meta-related elements, like <base>, <link>, <script>, <style> or <title>

<style> ... </style>

The HTML <style> element contains style information for a document, or part of a document.

<title> ... </title>

The HTML Title element (<title>) defines the document's title that is shown in a browser's title bar or a page's tab.

Example:
