\v   — Vertical tabulator

String Methods

charAt()

Returns a character at a specified position inside a string

charCodeAt()

Gives you the unicode of character at that position

concat()

Concatenates (joins) two or more strings into one

fromCharCode()

Returns a string created from the specified sequence of UTF-16 code units

indexOf()

Provides the position of the first occurrence of a specified text within a string

lastIndexOf()

Same as indexOf() but with the last occurrence, searching backwards

match()

Retrieves the matches of a string against a search pattern

replace()

Find and replace specific text in a string

search()

Executes a search for a matching text and returns its position

slice()

Extracts a section of a string and returns it as a new string

split()

Splits a string object into an array of strings at a specified position

substr()

Similar to slice() but extracts a substring depended on a specified number of characters

substring()

Also similar to slice() but can't accept negative indices

toLowerCase()
